Forecast for Tuesday 16 Nov 2021

Weather: Strengthening southwesterly winds will be a feature of the day, these perhaps touching gale force for a short time through early afternoon as a band of patchy rain and lower, thicker cloud sinks southeast across the area. This will clear to leave some late sunshine then a dry, increasingly clear evening.

Chance of cloud free mountain/hill tops above 700m: 80% early and late, but 40% through the middle of the day.

Visibility: A few patches of cloud are possible around summit level through morning, these becoming more extensive for a few hours from late morning and perhaps descending to 500m. Rain generally doing little to impact visibility.

Meteorologist's View

Be aware of the chance of poor visibility through the middle of the day as well as strong, perhaps gale force winds.

Forecast for Wednesday 17 Nov 2021

Weather: A bright, largely dry start with a cool and keen westerly wind. The odd passing shower is possible although this looks unlikely. Cloud will thicken from the west from mid afternoon leaving a murky end to the day with poor visibility and spells of rain or drizzle which will persist into the evening.

Maximum wind: West 25-30mph gusting 40mph, easing slightly through afternoon.

Chance of cloud free mountain/hill tops above 700m: 90%, falling 10% from mid afternoon.

Visibility: Generally no issues through morning, just a few patches of cloud around summit level. Cloud will thicken and descend through evening, becoming extensive above 400m by dusk and even lower by midnight.

Temperature: **Valleys:** Plus 6 Celsius rising to around 10 Celsius.
At 700m: Plus 3 or 4 Celsius.
Freezing level: Above summits.
